

ARCHITECTURE TRANSFORMATION – circular, innovative, sustainable

The greatest task of architecture is to protect people and make their lives more comfortable and secure. In the last few decades we have had to realize that resources are finite. Architecture is increasingly focusing on this insight. This transformation of the architecture means no longer consuming resources, but rather constantly using them in other contexts if necessary. Durability, reuse, alternative materials and new ways of producing and using energy are about to become the norm in architecture.

Architecture transformation is progressing. The International Architecture Forum 2024 therefore presents such current state-of-the-art architectural projects and their thought leaders and shows paths to the future of building.

Programme

Thursday 21. November 2024

10.30 h
IBA exhibition
Reception (invited guests)

12.00 h
